

## How to Play: "Number Line Race"

1. Each player takes a number line, a marker and a starter tile.
2. Mix up the yellow tiles (do not include any starter tiles) and put in a pile face-down on the table.
3. Put the marker at 2. (Because the starter tile has 2 on it.) You are now ready to start.
4. Youngest player goes first. Take a tile and put it down next to the starter tile. Move the marker on the number line.
5. Keep taking turns and making your sum longer and longer.
6. The first player to reach -10 wins! (Yes it is first player to *minus* 10.)

*This game works best with two players... in this case you only need to print this page once. With four players you will need to print this page twice. With six players you will need to print this page three times. Etc.*
